Key Projects

User Auth Boilerplate
Web app built with React, Node.js, Express and Mongo DB for user authentication following MVC architecture. JWT is used for user authentication and Sendgrid mail API is used to activate users' accounts and reset password.

ME TUBE
Web app built with Node.js, Express and React. Youtube API was used to fetch the video data. It was fetched from the server-side using node-fetch, so it could hide sensitive information such as the API secret key.

WIKI TRIPS
Web app built with pure Javascript, CSS, HTML and multiple APIs for an all-in-one travel website. Mediawiki, Googlemaps, and Unsplash APIs were used for basic travel information. Openweather and Triposo APIs were used to provide weather, recommended attractions and hotels.
